Apotheosized: Immortal, free Mindset/Mnemonic Core Augmentations. - Remote backup(A) added in Augments, cost 1

Fragmentation: Risk ego instability; biosleeves (-1) Cohesion.

Self Selection: Beta sleeve w/+3 Aug.

Sleeve Augmentation Limits: Support Augmentation Points based on starting points and Natural Vigor. Special augmentations exempt. - +3 native Aug points. 2nd iteration of Skinweave is aftermarket w/a cost of 8, -1 for House Silva and used 1 of 3 Vig points.

Hindrances

Code of Honor	Major
The character keeps his word and acts like a gentleman.	
Phobia	Major
The character is afraid of something, and subtracts -1/-2 from all Trait rolls in its presence.	
Supremacist	Minor
You believe you are objectively better than others. Minor -2 to Persuasion rolls when dealing with your "lessers" as equals. Major -4 to Persuasion	
Quirk	Minor
The individual has some minor but persistent foible that often annoys others.	
Double Click to pick	Minor

Raise Calculator

To use the Raise Calculator, locate the base Target Number (TN). The numbers to the right of that TN are its raises. If theTN is9, for example, the next number (13) is one raise, then 17, 21, & so on.

Allies, Contacts, Drones

[1] Esper Lord
Requirements: Novice
Range: SINC x 2
Duration: Special
Execution Penalty: See Below
This Program is the result of many hours of writing code designed to interface your mind with a swarm of nanomachines, allowing you to control them with your thoughts in real time. The swarm is a mass of millions of microscopic spherical machines (espers) sporting arrays of retractable arms. By itself, a single esper is of little use, but by expanding and retracting its arms, it can intelligently arrange itself in relation to other espers. The swarm as a whole can take nearly any shape: flowing mist and liquids, or solid objects like walls, stabbing blades, or even clothing.
Your esper swarm, which you get for free when you select this Program, generally needs to stay fairly close to you, not venturing out of range, and staying within line of sight.
Each command given to your swarm requires an execution of the Esper Lord Program. The action itself takes place as part of the roll required to execute the Program.
The Execution Penalty depends on what you are directing the swarm to do (see below).
The following sections describe how your swarm can be commanded to perform some common actions:
Attack
Your swarm can be used to attack a target directly, either by slamming into him, striking as a razor-sharp stabbing tentacle, flowing over and devouring the target, surrounding and grappling him, and so on.
To make an attack, you must first select one of the attack forms described below. Each form of attack has a different Execution Penalty listed in parenthesis. Once you've made your selection, make an execution test as a free action. Once executed, you can attack with your SINC Skill as described in the attack form you selected.
Edges that grant bonuses or special effects when attacking or grappling cannot be applied to attempts to attack or grapple with your esper swarm.
Slam (-0): Your swarm configures itself into a solid tentacle-like shape and smashes into the target with crushing force. Make an attack against Parry, using your SINC. The attack deals SINC + 2d6 damage.
Stab/Slash (-1): Your espers take the shape of a diamond sharp blade, or multiple small blades, which stab and slash at your target. Make an attack against Parry, using your SINC. The attack deals SINC + 2d6 damage, and has AP: 4.
Grapple (-0): Wrapping around your

foe, your swarm attempts to grapple your opponent. When grappling with your swarm, Trait rolls use SINC instead of the usual Attribute or Skill required. You can perform other actions while your swarm grapples, but at the usual -2 penalty.
Devour (-3): Your swarm flows over your target, seeping into armor and ripping at his flesh and/or sensitive components. Make an attack against Parry, using your SINC. The attack deals SINC + 2d6 damage and ignores anything but fully sealed armor.
The swarm acts immediately after this Program is executed, as a free action. However, if you succeed on the execution roll with a raise, the swarm can act for 2 additional turns without needing to execute this Program again.
Templating
Your swarm can assume the shape of any object you have a fabrication template for. This automatically includes almost any basic shape, such as a chair or shovel. The swarm will maintain this shape until instructed to change form.
While the swarm can be instructed to take any shape, it cannot reproduce the capabilities of powered items. So if instructed to take the shape of a server array or PAc rifle, it will do so. But the server cannot switch on and the PAc rifle will not fire.
Commanding your swarm to take on a new shape requires an execution test with an Execution Penalty equal to the Cost of the item your swarm will mimic. The cost of basic shapes, like a big block, or a simple shape like a chair, is considered to have a Cost of 2. The swarm has enough mass to can expand itself to fully fill a 1” cube.

[2] Eminent Domain
Requirements: Novice
Range: SINC x 2
Duration: 1 Use or 1 Turn, or 3 Turns or 3 Uses with a Raise (See below)
Execution Penalty: -0 or -4 for heavily secured systems
For a brief moment, you seize control of the systems that operate the machines in the world around you, forcing them to obey your commands.
You can unlock computer-controlled doors, close gates, fire sentry guns, surge gravity generators, cause environmental systems to vent room atmospheres, and more.
This does not grant any control over the systems that normally operate these devices, only temporary control over the devices themselves.
The precise effects of this Program vary greatly based on its application. Opening

and closing doors and hatches is pretty selfexplanatory. Actions like cutting power to create darkness or releasing billowing smoke use the standard rules for darkness and obscurement.

Gravity Manipulation

Onboard ships and other places that use artificial gravity, the Savant may raise or lower the output of the gravitic generators. By successfully executing this Program, you can shift the level of gravity by one step in a Large Burst area. If you succeed with a raise, you can shift the gravity by two levels or affect two Medium Burst areas instead.

In anything other than normal gravity, characters suffer a -2 to Agility and Agilitybased Skill rolls.

Gravity	Jump	Str	Pace
Super Heavy	x.5	-2	-4
Heavy	x.5	-1	-2
Normal	--	--	--
Low	x2	+2	+2
Zero-G	SWSFC pg. 27	+2	+4

Direct Damage

When it comes to an attack, such as when you attempt to overload some nearby power coils, the GM should follow these basic guidelines:

Targets/ Area of Effect	Execution Penalty
1 Target	-0
Small Burst	-1
Medium Burst	-2
Cone	-2
Large Burst	-3

When using Eminent Domain in this way, first make your roll to Execute the Program. If you succeed, you may make an attack roll, using your SINC, against everyone in the affected area. The attack deals 3d6 damage.

Execution Penalty and Duration

Certain items may be more heavily secured than others, especially those that maintain the status quo or uphold the HPA. For example, attempting to override the restrictions on a compiler has an Execution Penalty of -4.

The effects of Eminent Domain are fleeting, generally only lasting a single round (or granting one use in the case of something like a compiler) before the security AI detects the intrusion and shuts you out. However, if you get a raise on your execution roll, the effects of this Program can last up to 3 turns.
